River forcing, seasonal climatology (2005–2023)

Day-of-year mean (line) + 10-90th percentile (shaded), all 19 years of the full-forcing record -- EVERY panel here is genuinely multi-year, unlike the original 44-yr

*Day-of-year mean + 10-90th percentile across all 19 years of forcing/*_interannual_2005-2023_*.csv (tools/build_interannual_*.py). Wind is hourly, aggregated to a daily mean before the day-of-year fold (24 hours/day exactly, no leap days). No new model run needed.*
